

## Replication File for Child-Adoption Matching

Allan Collard-Wexler  
August 27, 2013

### A. Underlying Data File:

1. Detailed information on BMOs (email files): pdf\_data\_short.dta.
2. Applications of PAPs: ChoicePanel\_AEJ1.do.
3. Information on disposition of BMOs: case\_data\_all.dta, case\_data\_all2.dta.

This data was collected from the adoptlink.com website. There are two separate webpages we are interested in:

- Grid ([http://www.adoptlink.com/domestic\\_grid.htm](http://www.adoptlink.com/domestic_grid.htm)): This is the list of currently available children on the website. This yields the choice panel.
- Cases(<http://www.adoptlink.com/status.htm>): This is the list of children who have been placed on the website in the past, the disposition of BMOs.

### B. Program Files:

The programs for the project can be run from make\_child\_adoption\_matching.sh. These include:

```
stata-mp -b do ChoicePanel_AEJ1.do
stata-mp -b do Matching_Regression_Match-Not_AEJ.do
stata-mp -b do Matching_Regression_AEJ_2.do
```

### C. Listing of Directory
